Chemistry and Physics of Lipids, 50 (1989) 289—291
Elsevier Scientific Publishers Ireland Ltd.

Subject Index

Volume 50

acylation of lysophosphatidylcholine, phospholipase D, phosphatidylcholine analogues, phospholipid synthesis, coupling of choline analogues to phosphatidic acid, 11
acyl derivatives, diglycerol, linear triglycerol, isomerisation and deblocking techniques, 63
aggregation, cell surface receptors, cell membranes, fluorescence microscopy, fluctuations, diffusion, 253
(*S*)-1-alkoxy-2,3-propanediols, (*S*)-glycidol, titanium alkoxides, 119
analysis program, fluorescence decay kinetics, phase transitions, lipid/membrane systems, 237

^{13}C-labeled ester lipid, ether lipid, phospholipid, ^{1}H-labeled ether lipid, *sn*-glycero-3-phosphoethanolamine, *sn*-glycero-3-phosphocholine, 163
Ca^{2+}, phosphatidic acid, phase separation, ternary mixture of phospholipids, calorimetry, 109
calorimetry, Ca^{2+}, phosphatidic acid, phase separation, ternary mixture of phospholipids, 109
calorimetry, tryptophan, liposomes, X-ray, fluorescence, ESR, 143
cell membranes, cell surface receptors, fluorescence microscopy, fluctuations, aggregation, diffusion, 253
cell surface receptors, cell membranes, fluorescence microscopy, fluctuations, aggregation, diffusion, 253
color scatterers, egg lecithin, passages, 87
conformationally restricted phospholipid analog, ether-linked phospholipid, phospholipid synthesis, 99
coupling of choline analogues to phosphatidic acid, acylation of lysophosphatidylcholine, phospholipase D, phosphatidylcholine analogues, phospholipid synthesis, 11
critical micellar concentration of detergents, solvatochromic probe, polarity probe, 51

deuterated, synthesis, diphytanylglycerol phospholipids, dihexadecylglycerol phospholipids, 2,3-diphytanyl-*sn*-glycerol-1-phosphate, 2,3-diphytanyl-*sn*-glycerol-1-phospho-3′-*sn*-glycerol, 23
N,N-diethylamido-selenophosphate, *N,N*-diethylamido-thiophosphate, phosphagen, phospholipid, 79
N,N-diethylamido-thiophosphate *N,N*-diethylamido-selenophosphate, phosphagen, phospholipid, 79
differential scanning calorimetry, phosphatidylethanol, 135
diffusion, cell surface receptors, cell membranes, fluorescence microscopy, fluctuations, aggregation, 253
digital imaging, fluorescence, lipids, lipolysis, lipid transport, 191
diglycerol, linear triglycerol, acyl derivatives, isomerisation and deblocking techniques, 63
dihexadecylglycerol phospholipids, synthesis, diphytanylglycerol phospholipids, deuterated, 2,3-diphytanyl-*sn*-glycerol-1-phosphate, 2,3-diphytanyl-*sn*-glycerol-1-phospho-3′-*sn*-glycerol, 23
dipalmitoylphosphatidylcholine, fusion, vesicle, gel filtration, fatty acid, 83
dipalmitoylphosphatidylglycerol, subtransition, pretransition, monovalent cations, 71
diphenyl-1,3,5-hexatriene, membrane fluidity probe, membrane order, 171
1,6-diphenyl-1,3,5-hexatriene, fluorescence anisotropy, multifrequency phase fluorometry, oxidized phosphatidylcholine, 1
diphenylbutadiene, lipid dynamics, fluorescence anisotropy, picosecond fluorometry, diphenylhexatriene, phospholipid bilayer, 105
diphenylhexatriene, lipid dynamics, fluorescence anisotropy, picosecond fluorometry, diphenylbutadiene, phospholipid bilayer, 105
2,3-diphytanyl-*sn*-glycerol-1-phosphate, synthesis, diphytanylglycerol phospholipids, dihexadecylglycerol phospholipids, deuterated, 2,3-diphytanyl-*sn*-glycerol-1-phospho-3′-*sn*-glycerol, 23
2,3-diphytanyl-*sn*-glycerol-1-phospho-3′-*sn*-glycerol, synthesis, diphytanylglycerol phospholipids, dihexadecylglycerol phospholipids, deuterated, 2,3-diphytanyl-*sn*-glycerol-1-phosphate, 23
diphytanylglycerol phospholipids, synthesis, dihexadecylglycerol phospholipids, deuterated, 2,3-diphytanyl-*sn*-glycerol-1-phosphate, 2,3-diphytanyl-*sn*-glycerol-1-phospho-3′-*sn*-glycerol, 23
dipole, microscopy, evanescent, orientation distribution, order parameters, radiation, near and asymptotic fields, 271

egg lecithin, color scatterers, passages, 87
electron paramagnetic resonance probes, lipid-protein bilayer membranes, fluorescent probes, 213
ESR, tryptophan, liposomes, X-ray, fluorescence, calorimetry, 143
ether-linked phospholipid, conformationally restricted phospholipid analog, phospholipid synthesis, 99
ether lipid, phospholipid, ^{1}H-labeled ether lipid, ^{13}C-labeled ester lipid, *sn*-glycero-3-phosphoethanolamine, *sn*-glycero-3-phosphocholine, 163

evanescent, microscopy, orientation distribution, order parameters, dipole, radiation, near and asymptotic fields, 271

fatty acid, fusion, vesicle, gel filtration, dipalmitoylphosphatidylcholine, 83
fatty esters, phenyl alkyl esters, synthesis, physical properties, 155
fluctuations, cell surface receptors, cell membranes, fluorescence microscopy, aggregation, diffusion, 253
fluorescence, lipids, digital imaging, lipolysis, lipid transport, 191
fluorescence, tryptophan, liposomes, X-ray, calorimetry, ESR, 143
fluorescence anisotropy, lipid dynamics, picosecond fluorometry, diphenylhexatriene, diphenylbutadiene, phospholipid bilayer, 105
fluorescence anisotropy, multifrequency phase fluorometry, oxidized phosphatidylcholine, diphenyl-1,3,5-hexatriene, 1
fluorescence decay kinetics, analysis program, phase transitions, lipid/membrane systems, 237
fluorescence microscopy, cell surface receptors, cell membranes, fluctuations, aggregation, diffusion, 253
fluorescence polarization, sterol structure, permeability of liposomes, 43
fluorescent probes, lipid-protein bilayer membranes, electron paramagnetic resonance probes, 213
fusion, vesicle, gel filtration, dipalmitoylphosphatidylcholine, fatty acid, 83

gel filtration, fusion, vesicle, dipalmitoylphosphatidylcholine, fatty acid, 83
sn-glycero-3-phosphocholine, ether lipid, phospholipid, ^{1}H-labeled ether lipid, ^{13}C-labeled ester lipid, *sn*-glycero-3-phosphoethanolamine, 163
sn-glycero-3-phosphoethanolamine, ether lipid, phospholipid, ^{1}H-labeled ether lipid, ^{13}C-labeled ester lipid, *sn*-glycero-3-phosphocholine, 163
(*S*)-glycidol, (*S*)-1-alkoxy-2,3-propanediols, titanium alkoxides, 119

^{1}H-labeled ether lipid, ether lipid, phospholipid, ^{13}C-labeled ester lipid, *sn*-glycero-3-phosphoethanolamine, *sn*-glycero-3-phosphocholine, 163

isomerisation and deblocking techniques, diglycerol, linear triglycerol, acyl derivatives, 63

linear triglycerol, diglycerol, acyl derivatives, isomerisation and deblocking techniques, 63
lipid-protein bilayer membranes, fluorescent probes, electron paramagnetic resonance probes, 213
lipid/membrane systems, fluorescence decay kinetics, analysis program, phase transitions, 237
lipids, fluorescence, digital imaging, lipolysis, lipid transport, 191
lipid dynamics, fluorescence anisotropy, picosecond fluorometry, diphenylhexatriene, diphenylbutadiene, phospholipid bilayer, 105
lipid transport, fluorescence, lipids, digital imaging, lipolysis, 191
lipolysis, fluorescence, lipids, digital imaging, lipid transport, 191
liposomes, tryptophan, X-ray, fluorescence, calorimetry, ESR, 143

membrane fluidity probe, diphenyl-1,3,5-hexatriene, membrane order, 171
membrane order, membrane fluidity probe, diphenyl-1,3,5-hexatriene, 171
microscopy, evanescent, orientation distribution, order parameters, dipole, radiation, near and asymptotic fields, 271
monogalactolipids, surface pressure-area isotherms, monolayer phase transitions, 127
monolayer phase transitions, surface pressure-area isotherms, monogalactolipids, 127
monovalent cations, dipalmitoylphosphatidylglycerol, subtransition, pretransition, 71
multifrequency phase fluorometry, fluorescence anisotropy, oxidized phosphatidylcholine, 1,6-diphenyl-1,3,5-hexatriene, 1

near and asymptotic fields, microscopy, evanescent, orientation distribution, order parameters, dipole, radiation, 271

one-pot detritylation-acylation, phosphatidylcholine synthesis, tritylacylglycerophosphocholine, 57
order parameters, microscopy, evanescent, orientation distribution, dipole, radiation, near and asymptotic fields, 271
orientation distribution, microscopy, evanescent, order parameters, dipole, radiation, near and asymptotic fields, 271
oxidized phosphatidylcholine, fluorescence anisotropy, multifrequency phase fluorometry, 1,6-diphenyl-1, 3,5-hexatriene, 1

passages, egg lecithin, color scatterers, 87
permeability of liposomes, sterol structure, fluorescence polarization, 43
phase separation, Ca^{2+}, phosphatidic acid, ternary mixture of phospholipids, calorimetry, 109
phase transitions, fluorescence decay kinetics, analysis program, lipid/membrane systems, 237
phenyl alkyl esters, fatty esters, synthesis, physical properties, 155
phosphagen, *N,N*-diethylamido-thiophosphate, *N,N*-diethylamido-selenophosphate, phospholipid, 79
phosphatidic acid, Ca^{2+}, phase separation, ternary mixture of phospholipids, calorimetry, 109
phosphatidylcholine analogues, acylation of lysophosphatidylcholine, phospholipase D, phospholipid synthesis, coupling of choline analogues to phosphatidic acid, 11
phosphatidylcholine synthesis, tritylacylglycerophospho choline, one-pot detritylation-acylation, 57
phosphatidylethanol, differential scanning calorimetry, 135
phospholipase D, acylation of lysophosphatidylcholine,

phosphatidylcholine analogues, phospholipid synthesis, coupling of choline analogues to phosphatidic acid, 11
phospholipid, *N,N*-diethylamido-thiophosphate, *N,N*-diethylamido-selenophosphate, phosphagen, 79
phospholipid, ether lipid, ^{1}H-labeled ether lipid, ^{13}C-labeled ester lipid, *sn*-glycero-3-phosphoethanolamine, *sn*-glycero-3-phosphocholine, 163
phospholipid bilayer, lipid dynamics, fluorescence anisotropy, picosecond fluorometry, diphenylhexatriene, diphenylbutadiene, 105
phospholipid synthesis, acylation of lysophosphatidylcholine, phospholipase D, phosphatidylcholine analogues, coupling of choline analogues to phosphatidic acid, 11
phospholipid synthesis, ether-linked phospholipid, conformationally restricted phospholipid analog, 99
physical properties, phenyl alkyl esters, fatty esters, synthesis, 155
picosecond fluorometry, lipid dynamics, fluorescence anisotropy, diphenylhexatriene, diphenylbutadiene, phospholipid bilayer, 105
polarity probe, solvatochromic probe, critical micellar concentration of detergents, 51
pretransition, dipalmitoylphosphatidylglycerol, subtransition, monovalent cations, 71

radiation, microscopy, evanescent, orientation distribution, order parameters, dipole, near and asymptotic fields, 271

solvatochromic probe, polarity probe, critical micellar concentration of detergents, 51
sterol structure, permeability of liposomes, fluorescence polarization, 43
subtransition, dipalmitoylphosphatidylglycerol, pretransition, monovalent cations, 71
surface pressure-area isotherms, monogalactolipids, monolayer phase transitions, 127
synthesis, diphytanylglycerol phospholipids, dihexadecylglycerol phospholipids, deuterated, 2,3-diphytanyl-*sn*-glycerol-1-phosphate, 2,3-diphytanyl-*sn*-glycerol-1-phospho-3′-*sn*-glycerol, 23
synthesis, phenyl alkyl esters, fatty esters, physical properties, 155

ternary mixture of phospholipids, Ca^{2+}, phosphatidic acid, phase separation, calorimetry, 109
titanium alkoxides, (*S*)-1-alkoxy-2,3-propanediols, (*S*)-glycidol, 119
tritylacylglycerophosphocholine, phosphatidylcholine synthesis, one-pot detritylation-acylation, 57
tryptophan, liposomes, X-ray, fluorescence, calorimetry, ESR, 143

vesicle, fusion, gel filtration, dipalmitoylphosphatidylcholine, fatty acid, 83

X-ray, tryptophan, liposomes, fluorescence, calorimetry, ESR, 143
